Docket No.: 0171-1284PUS1

Page 2 of 11

AMENDMENTS TO THE CLAIMS

1. (Original) A compartmented container to hold two or more contents separately in

individual compartments, which is formed from a resin film or sheet having a heat-sealable layer

on at least one side thereof so that the heat-sealable layer constitutes the inner walls of said

container, and the opposing inner walls are heat-sealed partially and peelably to form the weakly

sealed part which divides the inside of the container into compartments, wherein said heat-

sealable layer is formed from a composition of propylene copolymer composed of the following

components (A) and (B), wherein

Component (A): a propylene copolymer composed of propylene and ethylene and/or C₄₋₈

α-olefin, which gives such a specific ratio of the amount of elution measured by the temperature

rising elution fractionation method (at temperatures ranging from 0°C to 140°C with

o-dichlorobenzene as a solvent) that the ratio of the amount of elution at 0°C to the whole

amount of elution is not less than 15 wt% and not more than 50 wt%, and the ratio of the amount

of elution at 60°C to 90°C to the whole amount of elution is not less than 5 wt% and less than 15

wt%,

Component (B): a propylene copolymer composed of propylene and ethylene and/or C₄₋₈

 α -olefin, which gives such a specific ratio of the amount of elution measured by the temperature

rising elution fractionation method (at temperatures ranging from 0°C to 140°C with o-

dichlorobenzene as a solvent) that the ratio of the amount of elution at 0°C to the whole amount

of elution is not less than 0 wt% and not more than 25 wt%, and the ratio of the amount of

elution at 60°C to 90°C to the whole amount of elution is not less than 15 wt% and not more than

70 wt%.

2. (Original) The compartmented container as defined in claim 1, wherein the weakly

sealed part is formed by heat-sealing with an easy peel tape inserted between the opposing inner

walls, said tape having as the surface layer a heat-sealable layer composed of said composition of

propylene copolymer.

3. (Original) The compartmented container as defined in claim 1 or 2, which has a port

made from polypropylene resin.

4. (Previously presented) The compartmented container as defined in claim 1, wherein the

composition of propylené copolymers is composed of component (A) and component (B) in a

ratio of from 98:2 to 50:50 (by weight).

5. (Currently amended) The compartmented container as defined in claim 1, wherein the

composition of propylene copolymers contains a styrene elastomer with a styrene content not

more than 25 wt% in a ratio an amount of 1 to 10 wt%.

6. (Previously presented) The compartmented container as defined in claim 1, wherein the

resin film or sheet has a laminated structure of at least three layers, including heat-sealable layer,

intermediate layer, and the outermost layer.

7. (Previously presented) The compartmented container as defined in claim 1, wherein the

resin film or sheet gives a total light transmittance not lower than 80% and a haze value not

higher than 25% when tested according to JIS K7105 immediately after sterilization at 121°C for

30 minutes.

8. (Previously presented) The compartmented container as defined in claim 1, wherein the

weakly sealed part gives a heat seal strength of 1 to 6 N/15 mm and the other heat-sealed part

than the weakly sealed part gives a heat seal strength not lower than 25 N/15 mm when tested

according to JIS Z0238 (for 180° peeling).

(Original) The compartmented container as defined in claim 8, wherein the capacity is 9.

smaller than 500 mL, and the weakly sealed part has a heat seal strength of 1 to 3 N/15 mm.

(Original) The compartmented container as defined in claim 8, wherein the capacity is 10.

not smaller than 500 mL, and the weakly sealed part has a heat seal strength of 3 to 6 N/15 mm.
